Integrated

Home Package Solutions

For more than 50 years, builders and contractors have come to trust and rely on Universal Forest Products for all their building material needs. As part of Universal Forest Products, we at Caliper understand the building business, and are continuously expanding our products and services to help meet the demands of an ever-changing construction industry.

Caliper™ Building Systems offers integrated home building systems that streamline the building process by reducing downtime, cost overruns and excessive labor costs, thus increasing the efficiency and simplicity of your home building project. With Caliper Building Systems, you'll be able to increase your business by building and closing on your homes faster, allowing you to move onto your next project sooner.

From start to finish, Caliper Building Systems is your one source for design, materials and delivery. From sales, design, engineering and production to our on-time delivery, Caliper Building Systems helps take the guesswork, hassles and headaches out of on-site building.

Sales & Design

Caliper Building Systems offers a variety of home plans as well as custom design capabilities. Our experienced sales and design teams work with you from the initial design phase to the final estimating and field verifications required to provide a package tailored to your specific needs. Using computerized drafting technology, our design team creates detailed drawings of floor plans, foundation plans, elevations and cross-sections. Additionally, our designers create the necessary design drawings for the manufacturing of our factory-built components and the final field assembly drawings.

Final Production

Starting with our computer engineering technology and putting it to work in our manufacturing facility enables Caliper Building Systems to manufacture all the components inside a controlled environment, ensuring efficient production and engineered excellence. This process helps eliminate many of the costly on-site problems that can arise in the field such as change orders, construction delays due to scheduling, weather and damaged materials or theft. Plus there's less material waste on site, thus saving you money on disposal fees and giving you a clean and efficient job site.
